### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Arthur Crawford on September 11, 2009.

#### **Abstract**

The abstract has been replaced with the following:

A process for producing a protein hydrolysate derived from keratin containing material with an oxidative bleaching agent at an acidic pH and mixing the keratin hydrolysate as an additive to the wet-end of a papermaking process. The process achieves a paper with a lower porosity and greater breaking length.

#### **Claims**

Claim 1 has been replaced with the following: A process comprising contacting a keratin-containing material with a solution which comprises a bleaching agent at an acidic pH ranging from 3-6 to produce a keratin protein hydrolysate and adding said keratin protein hydrolysate into the wet-end of a papermaking process.

Claim 8 has been replaced with the following: A process for preparing a paper pulp comprising mixing in the wet-end of a papermaking process a keratin protein hydrolysate with virgin and/or recycled cellulose fibers and recovering the paper pulp so obtained wherein said keratin protein hydrolysate is derived from keratin-containing material prepared by contacting the keratin-containing material with a solution which comprises a bleaching agent at an acidic pH ranging from 3-6.

Claim 9 has been replaced with the following: Process for preparing a paper product comprising mixing in the wet-end of a papermaking process a keratin protein hydrolysate with

Art Unit: 1791

virgin and/or recycled cellulose fibers, dewatering the mixture so obtained, pressing the dewatered material, drying the pressed material, and recovering the paper product so obtained wherein said keratin protein hydrolysate is derived from keratin-containing material prepared by contacting the keratin-containing material with a solution which comprises a bleaching agent at an acidic pH ranging from 3-6.

Claims 10-14 are canceled.

2. The following is an examiner's statement of primary reasons for allowance: The process for producing a keratin protein hydrolysate is known. The use of keratin hydrolysates is known for coating operations, use in inks in the paper making arts and applying to dry pulp or paper. However, the prior art has failed to show the mixing of a keratin protein hydrolysate to the wet-end where the protein hydrolysate was produced with an oxidative bleaching agent at an acidic pH. The applicant has support for the range of 3-6 in pg 2 of the spec lines 19-20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. 4,184,914 teaches apply a keratin hydrolysate to the size press, not the wet-end.

U.S. 4,591,497 suggests producing keratin hydrolysate for odor reduction and absorbing it on paper. Absorption on paper (which means it is dry) is not mixing in the wet end.

Art Unit: 1791

U.S. 6,296,860 and U.S. 6,500,443 disclose using keratin protein hydrolysate as a coating, coatings are not mixing in the wet-end.

U.S. 2008/0207867 teaches the use of hydrolyzed keratin as a paper additive however the instant application has priority to this application.
